## Tiller-Wheel™

Patent Pending

Creates more room in the cockpit when...

- In the slip!
- At anchor!
- On mooring!

**Think About It!** This all came about because we removed our wheel in the slip, but felt at unease when at anchor and didn't want to pay a lot for a folding or elliptical wheel. Sure, a vise grip™ might do the same job – but will also mess up the shaft. Our thought process started!

**Designed Right!** We presumed that the keyway might be in various positions when the rudder is in line with the keel, so the hub has 3 keyway slots to mount the **Tiller-Wheel™** in line with the pedestal! It will fit all 1" OD shafts with a 1/4" keyway. Contact us for others.

**Installation!** Unscrew the shaft nut, remove and store the wheel, then slide the **Tiller-Wheel™** onto the shaft and tighten the thumbscrew. That's it! Put the wheel nut on if you wish. Now, you've got the room and safety to boot!

**Construction:** All metal is stainless steel. The end knob is reinforced plastic. Hubs are stainless or Delrin™ and the shaft is securely pinned to the hub.

## A New Product for Sailboats!

### Stainless Steel Hub

\$295.00 delivered cost in USA  
(48 states)

### Delrin™ Hub

\$195.00 delivered cost in USA  
(48 states)
